

**R E M A R K S**

Reconsideration of this application, as amended, is respectfully requested.

**Allowable Subject Matter**

The Examiner's indication of the allowability of the subject matter of previous claim 4 is respectfully acknowledged. As suggested by the Examiner, independent claims 1 and 11 have been amended to include the subject matter of previous claim 4.

Claim 11, moreover, has been amended to correct an obvious clerical error.

No new matter has been added, and no new issues have been raised.

Accordingly, it is respectfully submitted that claims 1 and 11 as well as claims 9-10 and 12-13 respectively depending therefrom are now in condition for immediate allowance.

In view of the foregoing, entry of this Amendment, allowance of the claims and the passing of this application to issue are respectfully solicited.

Respectfully submitted,

Douglas Holtz

**VERSION WITH MARKINGS TO SHOW CHANGES MADE**

Claims 1 and 11 have been amended as follows:

1. (Third Amended) A screen for a rear projection type projector, comprising:

a lenticular lens screen formed from at least two lenticular lens sheet members having respective edges which are bonded together at a junction plane; and

a transmissive diffusion screen that diffuses luminous fluxes which have passed through the lenticular lens screen to expand a viewing angle;

wherein said transmissive diffusion screen is arranged on an observer side of the lenticular lens screen; and

wherein the junction plane is positioned along an off center portion of a main surface of the main screen.

11. (Amended) A screen for a rear projection type projector, comprising:

a holographic screen formed from at least two holographic screen sheet members having respective edges which are bonded together at a junction plane; and

a transmissive diffusion screen that diffuses luminous fluxes which have passed through the holographic screen to expand a viewing angle;

wherein said transmissive diffusion screen is arranged on an observer side of the holographic screen; and

wherein the junction plane is positioned along an off center portion of a main surface of the main screen.
